Faculty within the Department of Molecular and Comparative Pathobiology conduct research which includes animal models of HIV/AIDS, prenatal stress, atherosclerosis, and neurodegenerative disease.

The Department of Molecular & Comparative Pathobiology

Comparative psychology refers to the scientific study of the behavior and mental processes of non-human animals, especially as these relate to the phylogenetic history, adaptive significance, and development of behavior. Research in this area addresses many different issues, uses many different methods and explores the behavior of many different species from insects to primates.

Comparative genomics is a field of biological research in which the genomic features of different organisms are compared. The genomic features may include the DNA sequence, genes, gene order, regulatory sequences, and other genomic structural landmarks. In this branch of genomics, whole or large parts of genomes resulting from genome projects are compared to study basic biological similarities ...
