Ethmoid bone Nasal bone Nasal cartilage Vomer bone Palatine bone Maxilla Medial View of Nasal Cavity  
Bones seen here which contribute to the boundaries of the nasal cavity: sphenoid bone, ethmoid bone, vomer bone, palatine bone, palatine process of the maxilla.

### **The Bones PDF - Class Videos**

Bone consists of living cells widely scattered within a nonliving material called the matrix. The matrix is formed by osteoblasts, cells that are constantly renewed in the bone. Osteoblasts make and secrete the protein collagen, which makes bones elastic so that they can give under the stresses generated by walking, lifting, and other activities.

The adult human skeleton contains 206 bones which vary in size from the almost microscopic ossicles of the inner ear to femora which may exceed 450 mm in length. This great variation in size is accompanied by similar variation in shape which makes identification of individual bones relatively straightforward.

sounds like a formidable task, but many bones are paired, such as the right and left femur (pl. femora), right and left parietals, and right and left ribs. If the non-paired bones are identified first, the paired bones are much easier to recognize. The skeleton may be separated into two parts, the cranial (skull) portion
