Deep learning (also known as deep structured learning or hierarchical learning) is part of a broader family of machine learning methods based on learning data representations, as opposed to task-specific algorithms. Learning can be supervised, semi-supervised or unsupervised. Deep learning architectures such as deep neural networks, deep belief networks and recurrent neural networks have been ...

You're interested in deep learning and computer vision.....but you don't know how to get started. Let me help. Whether this is the first time you've worked with machine learning and neural networks or you're already a seasoned deep learning practitioner, Deep Learning for Computer Vision with Python is engineered from the ground up to help you reach expert status.

Deep Learning with OpenCV. In the first part of this post, we'll discuss the OpenCV 3.3 release and the overhauled dnn module. We'll then write a Python script that will use OpenCV and GoogleLeNet (pre-trained on ImageNet) to classify images.

History. Recurrent neural networks were based on David Rumelhart's work in 1986. Hopfield networks were discovered by John Hopfield in 1982. In 1993, a neural history compressor system solved a "Very Deep Learning" task that required more than 1000 subsequent layers in an RNN unfolded in time.

Statistical methods are used at each step in an applied machine learning project. This means it is important to have a strong grasp of the fundamentals of the key findings from statistics and a working knowledge of relevant statistical methods.

The Internet of Things (IoT) is rapidly coming of age. Billions of devices are already Internet-connected. Standards and protocols are stabilizing. Increasingly, network professionals are being called upon to integrate real IoT devices and applications, and solve real problems with IoT technologies.
