The course is the first in a series of three courses that teach the fundamentals of embedded systems as

applied to the ARM Cortex-M family of microcontrollers. This first course is an introduction to computers and interfacing focusing on assembly language and C programming and could be delivered at the college level with little or no prerequisites.

Embedded Systems: Introduction to ARM Cortex-M

Embedded System Software. The software of an embedded system is written to execute a particular function. It is normally written in a high-level setup and then compiled down to offer code that can be stuck within a non-volatile memory in the hardware. An embedded system software is intended to keep in view of the following three limits
