Peak oil is the theorized point in time when the maximum rate of extraction of petroleum is reached, after which it is expected to enter terminal decline. Peak oil theory is based on the observed rise, peak, fall, and depletion of aggregate production rate in oil fields over time. It is often confused with oil depletion; however, whereas depletion refers to a period of falling reserves and ...

Shale energy extraction activities in residential areas have the potential to adversely affect human health. The oil and gas sector is the largest industrial source of volatile organic compounds, which are dangerous because they include hazardous air pollutants, such as the carcinogen benzene; and because they are precursors to ozone, which is also hazardous to health.
