A food web (or food cycle) is a natural interconnection of food chains and a graphical representation (usually an image) of what-eats-what in an ecological community. Another name for food web is consumer-resource system. Ecologists can broadly lump all life forms into one of two categories called trophic levels: 1) the autotrophs, and 2) the heterotrophs.

A quantitative trait locus (QTL) is a locus (section of DNA) which correlates with variation of a quantitative trait in the phenotype of a population of organisms. QTLs are mapped by identifying which molecular markers (such as SNPs or AFLPs) correlate with an observed trait. This is often an early step in identifying and sequencing the actual genes that cause the trait variation.

Really great post Avinash. Stressing the 10/90 rule is really the key. I've found that most of the web analysts I know are frustrated by not being able to add even free tools to their view of the site (IT, HIPPO's, etc.).

### **Best Web Analytics Tools: Quantitative, Qualitative, Life**

10. Summary: Number fetishism leads usability studies astray by focusing on statistical analyses that are often false, biased, misleading, or overly narrow. Better to emphasize insights and qualitative research. There are 2 main types of user research: quantitative (statistics) and qualitative (insights). Quant has quaint advantages, but qualitative delivers the best results for the least money.
