Representative jammers are shown in Fig. 1. 5 High power jammers are easy targets to find and to attack because of their large radiated power. Lower power jammers are hard to find. It is important to defend against them by improved anti-jam technologies within the receiver, by improving antenna, or by integrating with an inertial navigation system or other devices not subject to jamming.

### **Navigation sensors and systems in GNSS degraded and denied**

tem was the requirement for a high bandwidth. Many MEMS accelerometers offer a high bandwidth, but MEMS gyroscopes are typically 100 hertz band -

### **INS Face Off - Inside GNSS**

An inertial navigation system is a navigation aid that uses a computer and motion sensors (accelerometers) to continuously calculate via dead reckoning the position, orientation, and velocity (direction and speed of movement) of a moving object without the need for external references. Other terms used to refer to inertial navigation systems or closely related devices include inertial guidance ...

Magnetohydrodynamics (MHD; also magneto-fluid dynamics or hydro-magnetics) is the study of the magnetic properties and behaviour of electrically conducting fluids. Examples of such magneto-fluids include plasmas, liquid metals, salt water, and electrolytes. The word "magneto-hydro-dynamics" is derived from magneto-meaning magnetic field, hydro-meaning water, and dynamics meaning movement.
