Adamantane is a colorless, crystalline chemical compound with a camphor-like odor. With a formula $C_{10}H_{16}$, it is a cycloalkane and also the simplest diamondoid. Adamantane molecules consists of three connected cyclohexane rings arranged in the "armchair" configuration. It is unique in that it is both rigid and virtually stress-free. Adamantane is the most stable among all the isomers with ...

A natural product is a chemical compound or substance produced by a living organism – that is, found in nature. In the broadest sense, natural products include any substance produced by life. Natural products can also be prepared by chemical synthesis (both semisynthesis and total synthesis) and have played a central role in the development of the field of organic chemistry by providing ...

Immanuel Kant (1724–1804) is the central figure in modern philosophy. He synthesized early modern rationalism and empiricism, set the terms for much of nineteenth and twentieth century philosophy, and continues to exercise a significant influence today in metaphysics, epistemology, ethics, political philosophy, aesthetics, and other fields.

The development of visible-light-mediated allylation of unactivated $sp^3 C-H$ bonds is reported. The remote allylation was directed by the amidyl radical, which was generated by photocatalytic fragmentation of a pre-functionalized amide precursor.

The presence of halogen substituents in many natural products profoundly influences their biological activity (). For example, two chlorine substituents in vancomycin, the antibiotic of last resort for the treatment of multiple-drug resistant *S. aureus* infections, are required to achieve the clinically active conformation of this antibiotic through the control of atropisomer distribution ...
